(54) Title: **HEAT EXCHANGER AND PROCESS FOR FABRICATING SAME**

(57) Abstract: An oil cooler 1 to which a heat exchanger of the invention is applied comprises a plurality of flat hollow bodies 2 arranged one above another in parallel at a spacing and extending in a left-right direction, a communication member 3 disposed between left end portions of each adjacent pair of flat hollow bodies 2, and a spacer 4 disposed between right end portions of each adjacent pair of flat hollow bodies 2. The spacer 4 has bores 36 extending therethrough in the front-rear direction. The spacer 4 is disposed at a position corresponding to the cutoff portion of the partition wall 15 in the hollow body 2. A fluid of high pressure can be passed through the flat hollow bodies 2 of the oil cooler 1.
